

ClashPro Instruction

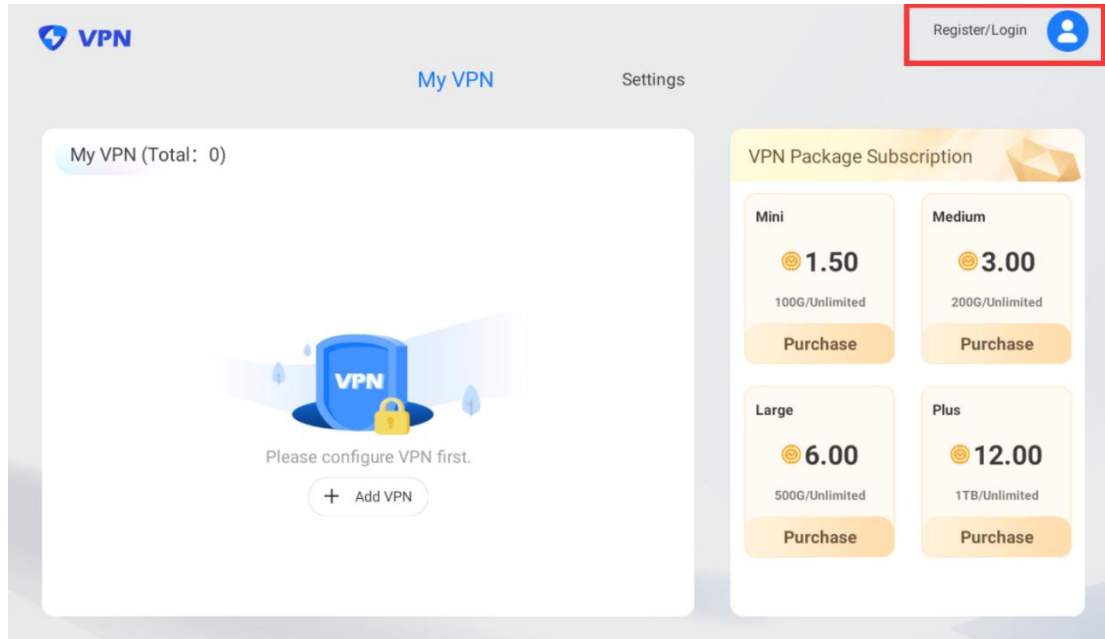

1.Download APK

ClashPro download link: <https://appstore-g.com/download/ClashPro>

2.Register/Login

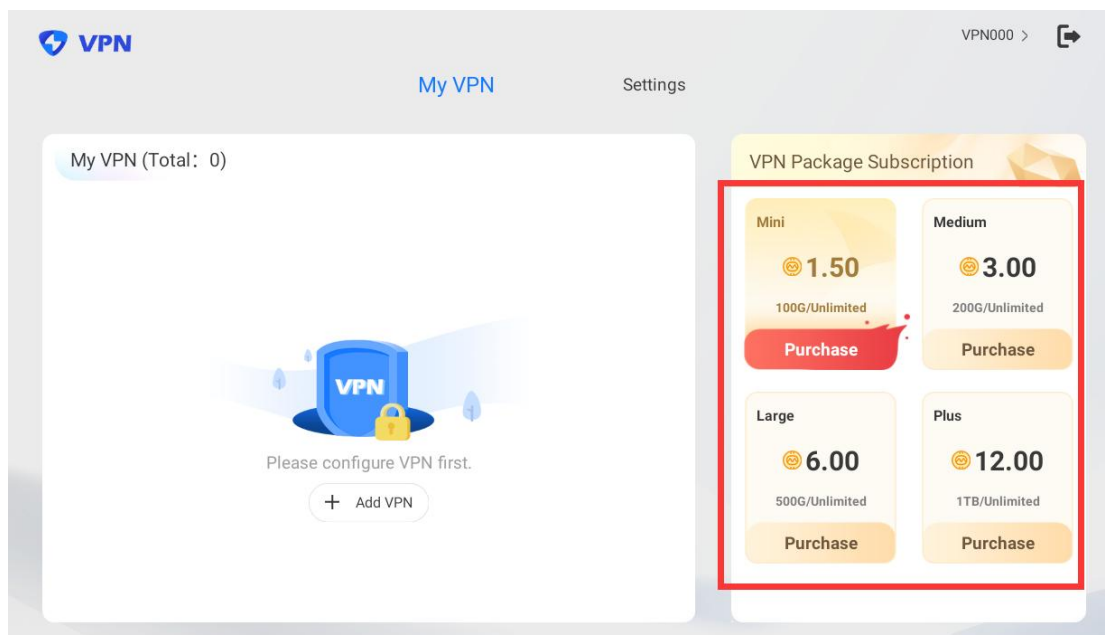

2.1 Existing mango account: Log in directly with your Mango account.

2.2 No mango account: Register a new account first and then log in.

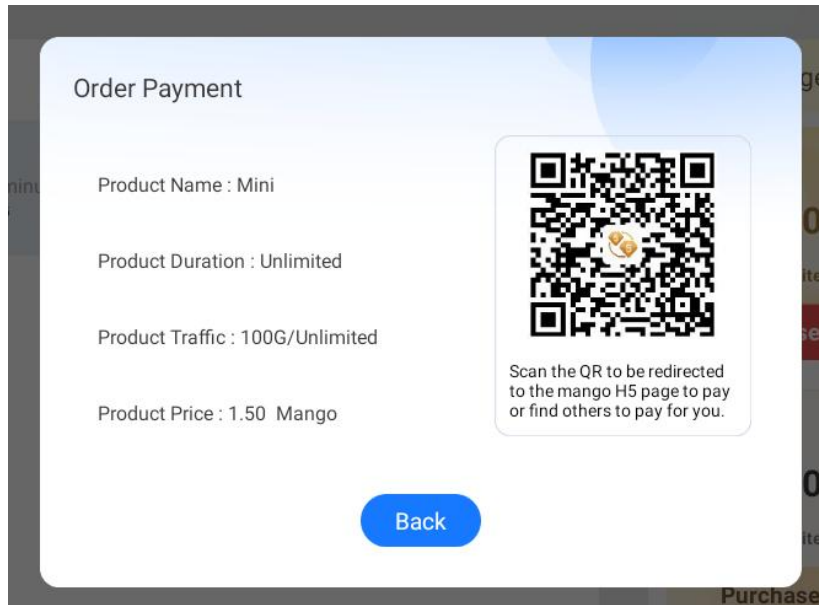

3.VPN Package Subscription

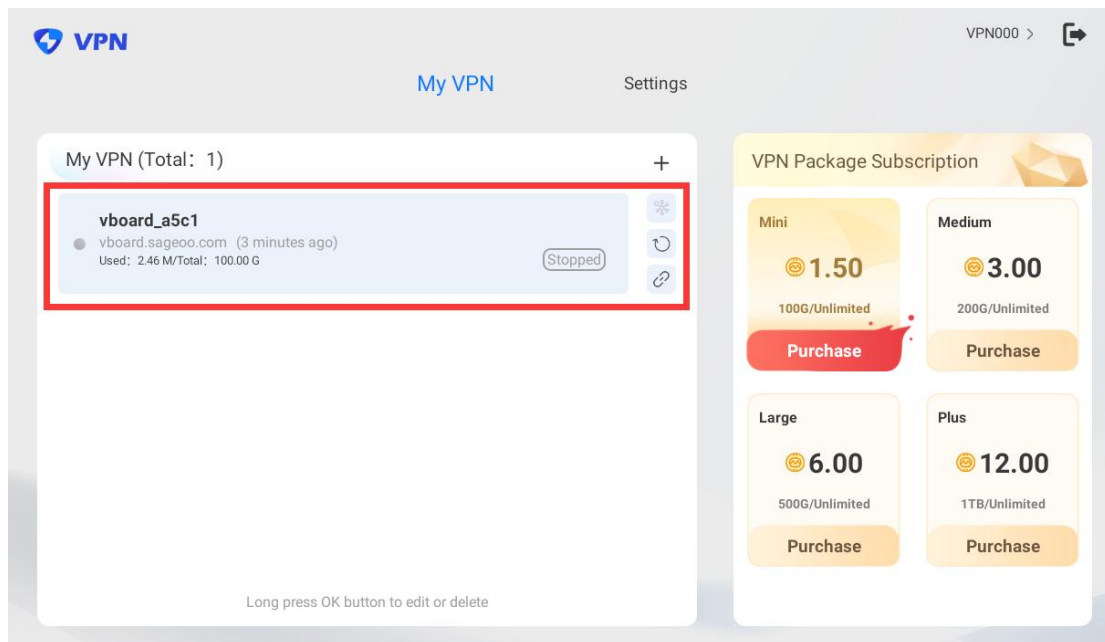

3.1 Choose a package: Select the VPN package you need.

3.2 Scan the QR to be redirected to the Mango H5 page to pay or find others to pay for you.

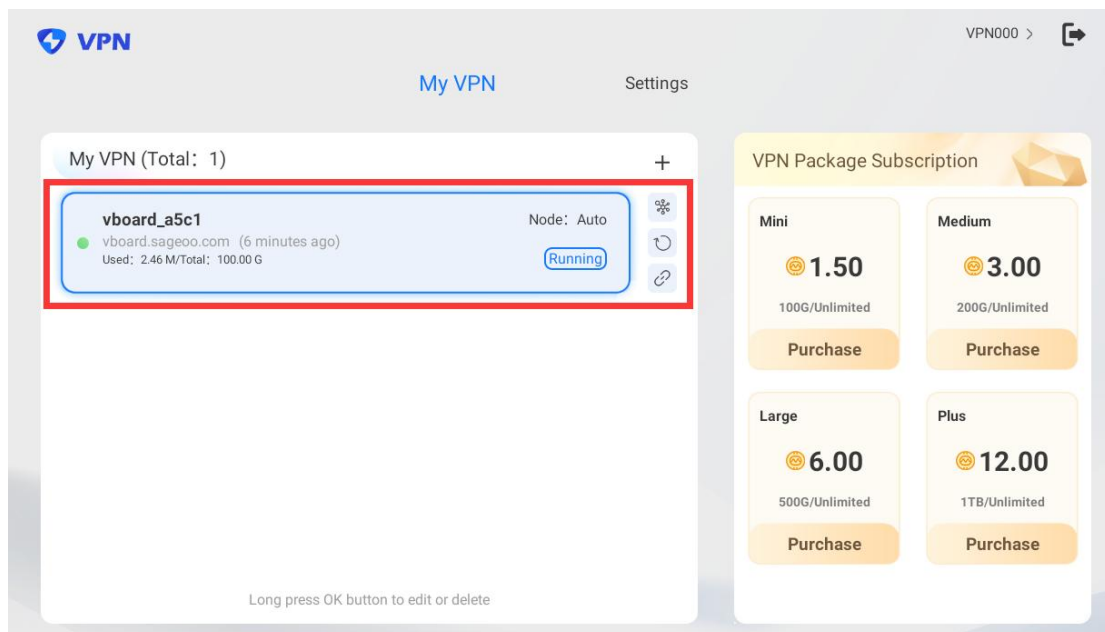

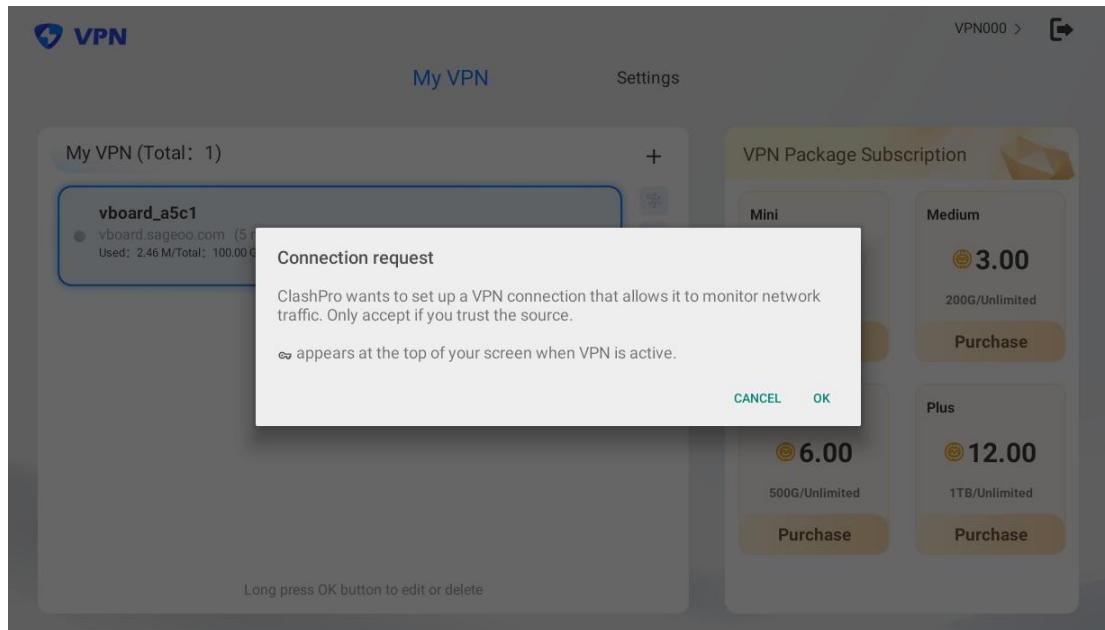

3.3 After payment is completed, the subscribed VPN information will be displayed in the My VPN list.

4.Start the VPN

4.1 Click to start the subscribed VPN service.

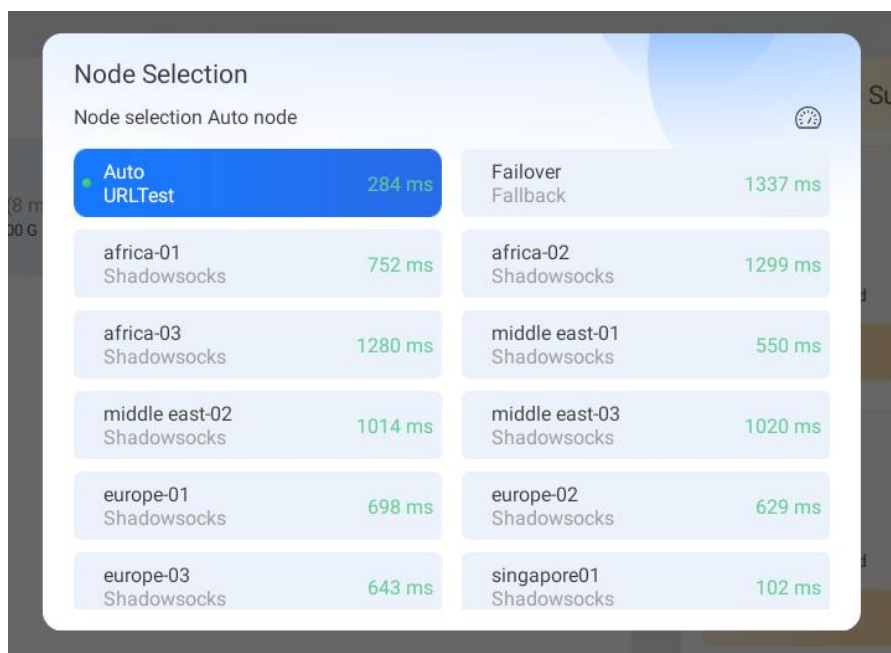

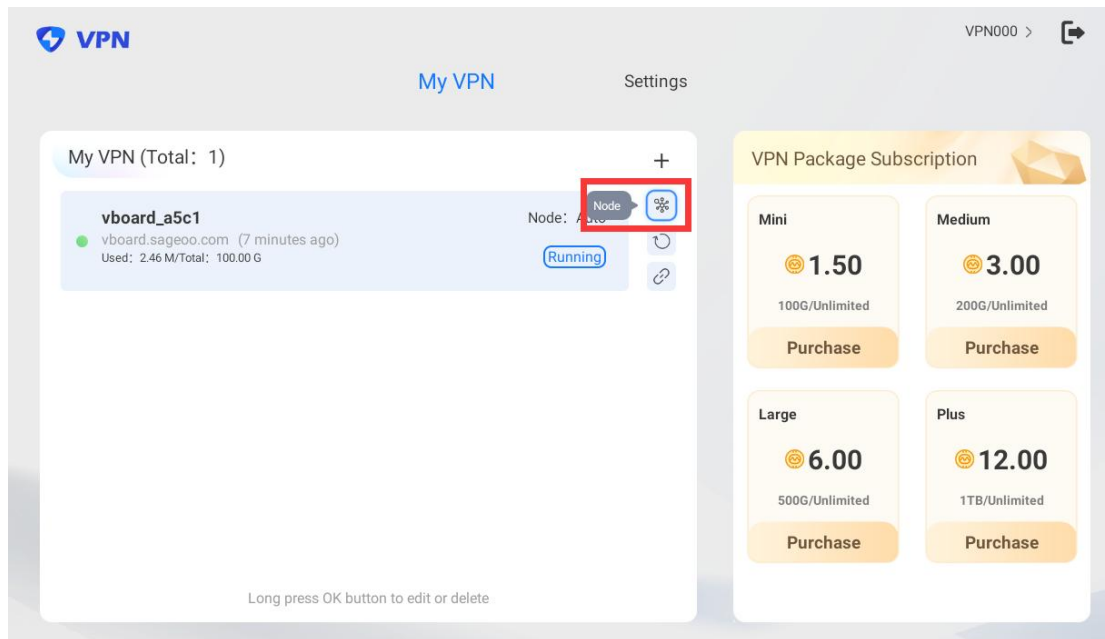

4.2 When starting the VPN for the first time, the system will request VPN permissions. Click "OK" to allow access. (This is an Android system prompt.)

5. Additional Features

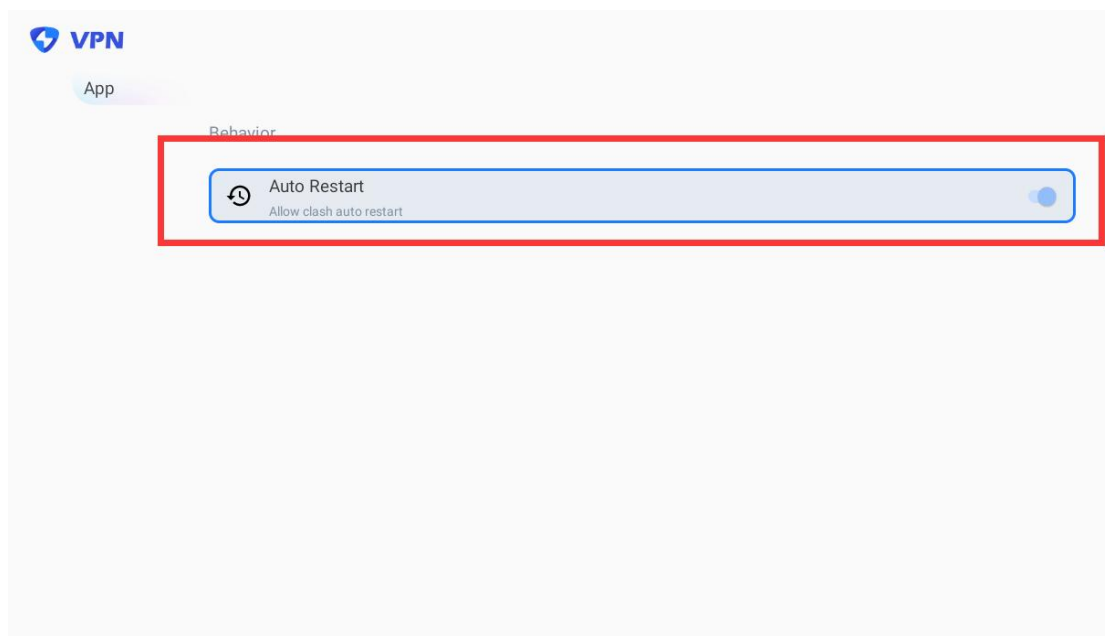

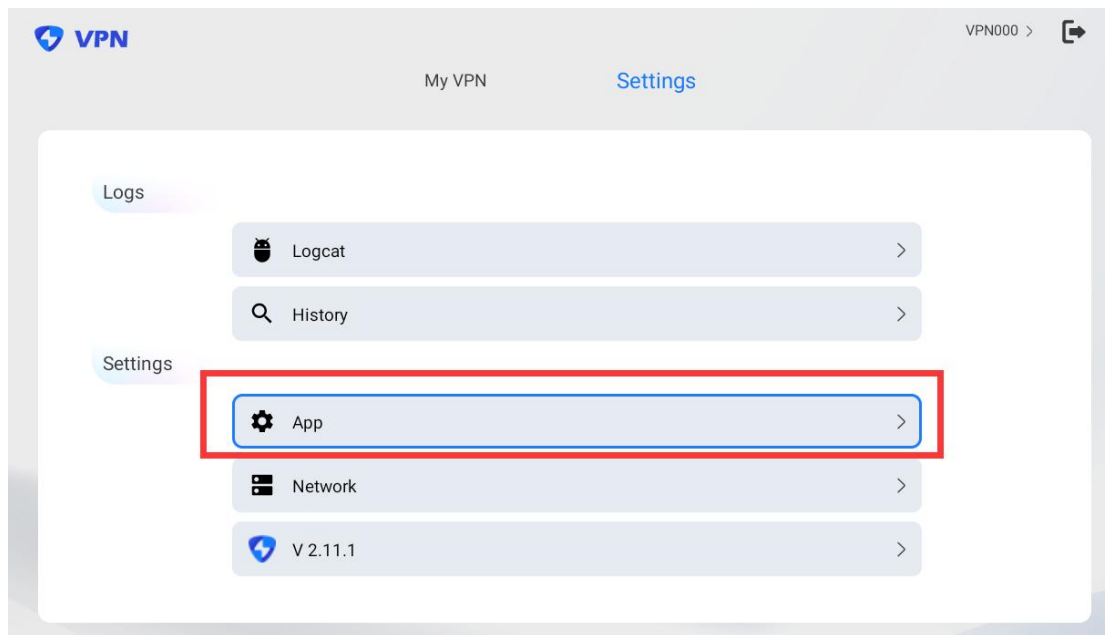

5.1 Switch Nodes

Open the node menu to change the node.

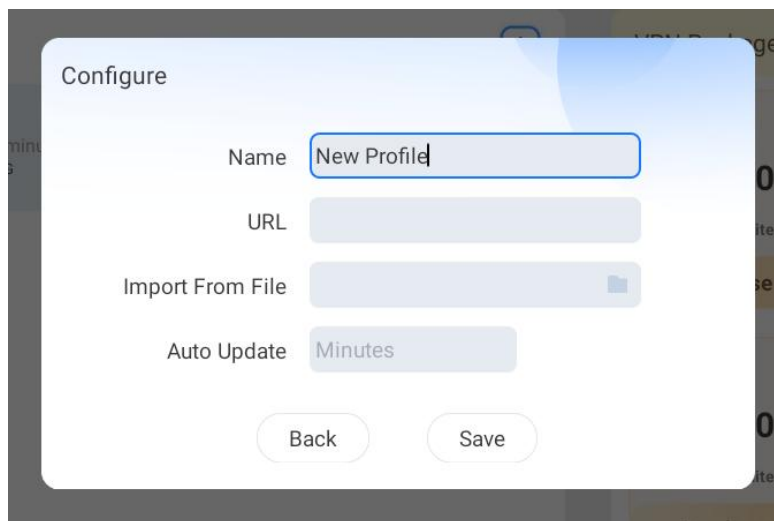

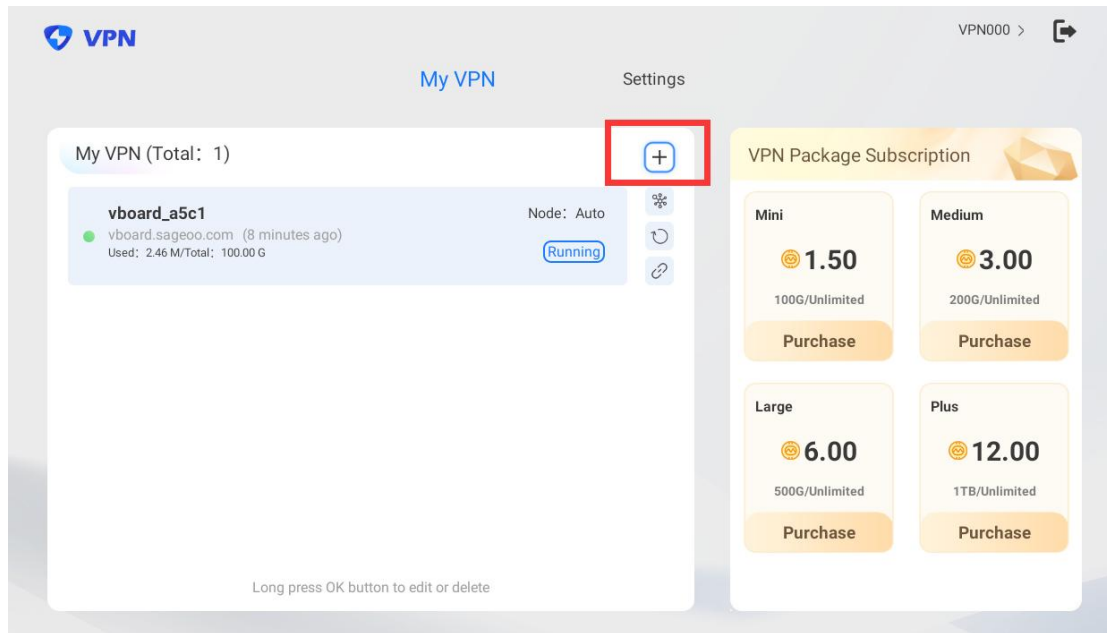

5.2 Auto Start

Go to: Settings > APP > Auto Restart: On

5.3 Add VPN Services Purchased with Other Accounts

Return to the homepage and click the "+" button. There are two ways to add: via URL or by importing a configuration file.

5.4 To share a VPN link across Windows, macOS, and iOS devices, follow these steps:

(1) Download the required application from the link provided below.

Download Clash for Windows (Verge):

<https://github.com/clash-verge-rev/clash-verge-rev>

Download Clash for MAC (Verge):

<https://github.com/wonfen/clash-verge-rev>

Download Clash for iOS (Verge):

<https://apps.apple.com/us/app/stash-rule-based-proxy/id1596063349>

(2) Retrieve the URL link from ClashPro and input it into the application. For comprehensive guidance on using Clash, refer to online tutorials as it is a widely accessible tool.
